# WE DEVELOP FOR YOU!

MESCO

MOTION CONTROL

SENSORS / ACTORS

SAFE I/O MODULES

MESCO Design Packages

As a result of many years of experience in the field of product development MESCO have come up with the concept of Design Packages. These are proven circuits and software components. With their help we develop customized solutions for your individual requirements.

The modular platform of software/hardware artefacts can be used, for example, for the development of:

- Industrial Ethernet interfaces
- Microcontroller cores (up to SIL3)
- Modular Inputs / Outputs / OSSD

MESCO Development Services

MESCO Engineering - Your competent partner for Embedded hardware and software development with flexible application of proven Design Packages, certification support for Fieldbus and Functional Safety.

hardware development

software development

explosion proof

industrial communication

functional safety

Tailor-made Development Solutions for:

- Customised hardware & software
- Industrial communication
- Functional safety
- Explosion proof

YOUR BENEFIT

The MESCO Development Services in combination with the MESCO Design Packages help you to get to your product much easier and much faster. They reduce your development effort.

Your advantages are:
- Simplified specification
- Reduced development time
- Reduced development risk
- Plannable costs and deadlines
- Simplified certification
- Faster on the market!

Sensors, actuators, drives or I/O modules ... with our know-how and Design Packages we realize development projects of highest quality in short development time and with reduced risk and costs.
